Request

We request approval to allow granite recovery within the entire work area (approved Limits of Disturbance) including within the area created by the 1000' foot distance limit placed as condition number ten (10) of the permit. See the proposed work area plan. Work within this area will still be more than 1000' from the nearest occupied residence, which is understood to be the intent of the condition.

We have complied with the 1000' distance condition as originally established in the work area to date. This distance was established from the nearest property corner of the East most lot in the Wasatch Resort subdivision (which is an unoccupied lot). See work area plan.

The current 1000' distance condition prevents access to the full extent of the work area established and is limiting our production rate and ability to recover the required amount of granite..

With access inside the 1000' distance condition we hope to be able to complete the recovery effort this year.

We will appreciate your full consideration of this request.
